The image shows a screenshot of the Stack Overflow website. The left sidebar contains navigation links: Home, PUBLIC, Questions (selected), Tags, Users, Companies, COLLECTIVES (with an info icon), Explore Collectives, TEAMS (with a plus icon), and Gempe. The main content area is titled 'Search Results' and shows results for the tag 'javascript'. It includes a search bar with 'All' and '[javascript]', a search button, and a link to 'Advanced Search Tips'. Below the search bar, there's a section for 'Results tagged with javascript' and 'Search options not deleted'. A paragraph explains that for questions regarding programming in ECMAScript (JavaScript/JS) and its various dialects/implementations (excluding ActionScript), users should note that JavaScript is NOT the same as Java and include all relevant tags. Below this, there are buttons for 'Unwatch tag' and 'Ignore tag', and links for 'Improve tag info', 'Top users', and 'Synonyms (14)'. The search results show 6,069,871 results. The first three results are listed with their vote counts, titles, descriptions, tags, and answers.

How can I remove a specific item from an array?

Asked 11 years ago Modified 2 days ago Viewed 9.9m times

10564

How do I remove a specific value from an array? Something like:

```
array.remove(value); // removes all elements with value
```

I have to use core JavaScript. Frameworks are not allowed.

javascript arrays

array.remove(index) or array.pull(index) would make a lot of sense. splice is very useful, but a remove() or pull() method would be welcome... Search the internet, you will find a lot of "What is the opposite of push() in JavaScript?" questions. Would be great if the answer could be as simple as plain english: Pull! – Gustavo Gonçalves Oct 24, 2020 at 15:51

For those who don't want `indexOf()` + `splice()`: developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/... – Ali NajafZadeh Aug 3, 2021 at 16:57

1

```
const array = [2, 5, 9]; console.log(array); const index = array.indexOf(5); if (index > -1) { array.splice(index, 1); } // array = [2, 9] console.log(array);
```

 – Iken Krueger Oct 22, 2021 at 21:57

1

```
array.filter((_, index) => index !== number);
```

 – Brian Drake Feb 3 at 13:29

2

@Gustavo Gonçalves I do not understand the problem: the `opposite of Array#push()` is well-known. (Of course, that is not what this question is asking for.)

Find the `index` of the array element you want to remove using `indexOf`, and then remove that index with `splice`.

This answer is not useful. It changes the contents of an array by removing existing elements.

```
const array = [2, 5, 9];
console.log(array);

const index = array.indexOf(5);
if (index > -1) {
  array.splice(index, 1); // 2nd parameter means remove one item only
}

// array = [2, 9]
console.log(array);
```

Run code snippet

Expand snippet

The second parameter of `splice` is the number of elements to remove. Note that `splice` modifies the array in place and returns a new array containing the elements that have been removed.

For the reason of completeness, here are functions. The first function removes only a single occurrence (i.e. removing the first match of `5` from `[2,5,9,1,5,8,5]`), while the second function removes all occurrences:

- 38 How to remove the matching element of the array
- 15 How can I remove an array element by index, using JavaScript?
